Call For Papers
19th International Workshop on
Foundations of Object-Oriented Languages
(FOOL 2012)
`http://www.cs.uwm.edu/~boyland/fool2012`

Abstract	August 5	Monday, 22 October 2012
Full Paper	August 12	A Workshop of SPLASH (OOPSLA) 2012
Notification	September 7	Tucson, AZ, USA
Final Paper	September 30	

The search for sound principles for object-oriented languages has given rise to much work during the past two decades, leading to a better understanding of the key concepts of object-oriented languages and to important developments in type theory, semantics, program verification, and program development.

Submissions for this event are invited in the general area of foundations of object-oriented languages. Topics of interest include language semantics, type systems, memory models, program verification, formal calculi, concurrent and distributed languages, database languages, and language-based security issues.

Papers are welcome to include formal descriptions and proofs, but these are not required; the key consideration is that papers should present novel and valuable ideas or experiences. The main focus in selecting workshop contributions will be the intrinsic interest and timeliness of the work, so authors are encouraged to submit polished descriptions of work in progress as well as papers describing completed projects.

We solicit submissions on original research not previously published or currently submitted for publication elsewhere. The program chair should be informed of any related submissions; see the ACM SIGPLAN Republication Policy. Submissions should be PDF in standard SIGPLAN 9pt conference format for a US-letter size page. While submissions can be up to 12 pages, shorter papers describing promising preliminary work are also encouraged. Papers must be submitted electronically via EasyChair.

An informal proceedings will be made publicly available on the web page. However, presentation at FOOL does not count as prior publication, and many of the results presented at FOOL have later been published at ECOOP, OOPSLA, POPL, and other main conferences.

Program Committee

Jonathan Aldrich, Carnegie Mellon University, PA, USA
John Boyland, University of Wisconsin-Milwaukee, USA, **chair**
Nicholas Cameron, Mozilla Corporation
Dave Clarke, Katholieke Universiteit Leuven, Belgium
William R. Cook, University of Texas at Austin, USA
Stephen Freund, Williams College, MA, USA
Ronald Garcia, University of British Columbia, Vancouver, Canada
Simon Gay, University of Glasgow, UK
Peter Müller, ETH Zurich, Switzerland
Uday S. Reddy, University of Birmingham, UK
Sukyoung Ryu, KAIST, Korea
Marco Servetto, Victoria University of Wellington, New Zealand
Scott F. Smith, The Johns Hopkins University, MD, USA
